Using Satellite Data to Reconstruct Variations in Times with No Satellites

Thomas Smith\textsuperscript{1,2}, Phillip Arkin\textsuperscript{2}, Li Ren\textsuperscript{2}, Sam Shen\textsuperscript{3}

\textsuperscript{1} NOAA/NESDIS/STAR/CoRP/SCSB, \textsuperscript{2} ESSIC/CICS, University of Maryland, \textsuperscript{3} San Diego State University

- Satellite-based analyses resolve global variations for a limited period
- Climate studies often need longer analyses
- Reconstructions use satellite-based statistics and in situ data to extend analyses
- Statistical testing shows the reliability of historical reconstruction

\textbf{GPCP and cross-validation reconstructions using historical sampling for two years.}
